## **DETAILED ACTION**

### ***Response to Arguments***

8. Regarding currently amended claims, the Applicant primarily argues that the prior art does not teach, “security for SOAP messages” in the cited paragraphs. This argument is not persuasive. Examiner respectfully requests the applicant to consider the reference as a whole along with reading the cited paragraphs from the previous office action.

Applicant's arguments amount to a general allegation that the claims define a patentable invention without specifically pointing out how the language of the claims patentably distinguishes them from the references.

Arteaga teaches “a security controller 230 enforces security policy. Through the security administrative component, a system administrator establishes a security policy that will be consistently enforced throughout all phases of execution of the system” see for example, in paragraph [0103]. Furthermore, Applicant broadly claims “security rule” without explaining what such security rule would encompass.

Therefore, the examiner respectfully asserts that the cited prior art does teach or suggest the amended subject matter broadly recited in the amended independent claims. The dependent claims are rejected at least by virtue of their dependency on the dependent claims and by other reason set forth in this office action. Accordingly, the rejection for the pending claims is respectfully maintained.

Examiner suggests that the independent claims be amended with specifics about security rule (see previous office action for reasons for allowed claims). Please refer to the previous office action for prior art rejection.
